Mobility Market Landscape

- Ethnographic snapshot = Gen-X / Gen-Y / Gen-Z
- Ubiquitous in nature - the experience is always on and ready to receive push content
- Devices today/tomorrow are location based sensitive and aware of user preference
- Mobile data services market is expected to grow from \$25 billion in 2003 to \$115 billion in 2008
- 1.3 billion mobile subscribers with projected growth rate of 175 - 200 million subscribers per year
- Mobile industry standardizing around SVG Tiny (SVG.t 1.2 + Micro-DOM) to deliver rich, dynamic, interactive experiences
- Carriers require additional functionality to drive usage and revenue
- Shipped 550 million Feature Phones/SmartPhone units to date with >800 million additional units projected by 2008

*Data points attributed from published 2004 reports and meetings... IDC / Jupiter / Forrester

Market Needs...

- In talking with publisher's around the globe - Japan, Europe, North America and Latin America the asks are consistent...
 - Education for creative's and their design discipline has evolved from table based layout to the complete separation of structure <XHTML /> from presentation <CSS />
 - General baseline knowledge of content creation for mobile
 - Content creation solutions for optimal user experiences - *cross platform* -
 - Software emulation for content quality assurance
 - Easily updatable standards compliant tools as technology profiles evolve
 - Roundtripping of code between designer / developer between leading IDE's and CMS/DAM systems
 - DRM and provisioning management
 - Authoring support for combined technologies: XHTML/CSS + SVG-t + SMIL
 - Industry test suites and formal quality assurance through certification

Were you expecting a Revolution? Not!!

- Revolutions make for good fantasies, but... they're risky...
 - We need advancement in progress **NOW** and not in 5 years...
 - Device ubiquity and standardization of W3C/OMA implementation's already exist (further work still needed...)
 - Carriers, Device Manufacturers, Software Vendors, and Content Developers require practical incremental advances
 - Work within the W3C's Compound Document architecture is going in the right direction
 - Best practices and guidelines materials through developer portals, white papers and sample projects/files

What do We Get?

- Mobile Web applications (non-browser) like...
 - Push and broadcast services
 - Messaging
 - Distributed UI
 - Media players
 - etc.
- Conformant mobile browsers across vendors
- Unbundling of technologies that can then be accessed and combined as necessary
- Authoring tools which take the burden away from the user...
 - No need for piles of devices for testing
 - Full control of compliance
 - Automated quality assurance

One Web?

- Do we *REALLY* want only one Web?
 - // Yes
 - wealth of existing Web content available *today* in organizational DMS/CMS systems
 - users know where to find what they're looking for on the Net

Make it Work Stupid!

- Test suites bring high levels of compliance and conformance to content testing in the following areas
- Formal certification is necessary...
 - Both W3C and OMA must be involved, although it is acceptable to have a 3rd party execute
 - W3C must create extensive test suites for W3C technologies to support the process
 - OMA must create mobile specific tests for OMA defined mobile profiles
 - It is critical for W3C/OMA to have final say for spec interpretation
- Mobile OK is an excellent concept to communicate compliance and conformance
